REASONS FOR ALLOWANCE

1. The amendment B filed 10/14/03 has been entered. Claims 22, 23, 25, and 99-104 have been cancelled. Claims 1-21, 24, 26-98 are pending in this Office action.

Allowable Subject Matter

2. Claims 1-21, 24, 26-98 are allowed.
3. The following is an examiner's statement of reasons for allowance: none of the prior art of the record discloses or suggests a method of transmitting data using multicarrier - type a modulation, comprising the steps of: allocating transmission data to the sub-carrier in an order, wherein the order is based on an importance of the transmission data and the first signal, and inserting a second signal in transmission data, wherein the second signal represents the order in which the transmission data are allocated to the sub-carriers based on the importance of the transmission data an the first signal, as recited in claims 1, 4, 27. None of the prior art of the record discloses or suggests a method of receiving data using multicarrier-type modulation, comprising the steps of: extracting received data of a signal representing an order in which the transmission data are arranged by a transmission device on the sub-carrier; and forming the received data according to the signal representing the order in which the transmission data are arranged by the transmission, as recited in claims 2, 26, 30.

Furthermore, none of the prior art of the record discloses or suggests a method of transmitting data from a local device to a remote device via transmission channel,

Art Unit: 2631

comprising: inserting a "Least Significant Data" flag and applying an algorithm that generates an OFDM symbol by using an inverse fast Fourier transform (IFFT) matrix modified so as to reduce a peak value of the signal, in case where the data is not highly important, as recited in claim 24.

None of the prior art of the record discloses or suggests a device for transmitting data to a remote device via transmission channel, comprising: an inserting unit for inserting into data an item of information corresponding to a chosen modulator, wherein a modulator is chosen according to an importance of a data received from the data source, and wherein the importance of data received from the data source also affects operation of the plurality of multiplexers, as recited in claim 27.

None of the prior art of the record discloses or suggests a method of managing information transmissions by radio between a base station and at least one peripheral stations, comprising: determining a number of carriers and a modulation in response to a required service quality, in terms of transmission error rate and transmission rate, for a given transmission of information between the base station and the at least one peripheral station, wherein the number of carriers and the modulation differs according to required service qualities, as recited in claims 41, 54, 74, and 91.

None of the prior art of the record discloses or suggests a method of receiving information coming from a radio communication channel, comprising: reconfiguring a number of carriers and the modulation according to a required qualities in terms of transmission error rate and transmission rate for an information transmission, the

number of carriers and the information reconstructed differing according to the required service qualities, as recited in claims 64, 84.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Varghese et al (U.S. Pat. 5,313,467) disclose an integrated communication link in a communication network.

Chow et al (U.S. Pat. 5,479,447) disclose a method and apparatus for adaptive, variable bandwidth, high-speed data transmission of a multicarrier signal over digital subscriber lines.
